REPORT OF ANALYSIS

For: (10786) PEOPLE SERVICE-WATERLOO
WATERLOO

Detailed Method Description(s)

Total coliforms by Quantitray SM 9223 B

Sample analysis follows MWL MI 102 which is based on Standard Method (SM 9223 B). Aqueous samples are shaken thoroughly to obtain a homogeneous sample and the chlorine level is checked. The volume is decanted to 100mL and selective media is added. The solution is placed in a Quantitray, sealed, and incubated. After incubation, yellow wells (total coliform) are counted and compared to the MPN table. Results are reported as most probable number per 100 mL (MPN/100 mL).

The result(s) issued on this report only reflect the analysis of the sample(s) submitted.
