

Approve disinfection of library

**VILLAGE OF WATERLOO
RESOLUTION NO. 06-09-20-04**

WHEREAS, Library Director, Julie Jorgensen, has approached the board with the need to disinfect the library following the primary elections; and

WHEREAS, the Board agrees that the library has a need for these services; and

WHEREAS, SteriClean has submitted a bid to complete such services at a cost of \$1,079.16.

NOW THEREFORE, BE IT RESOLVED BY THE BOARD OF TRUSTEES OF THE VILLAGE OF WATERLOO, NEBRASKA, AS FOLLOWS:

THAT, the bid from SteriClean in the amount of \$1,079.16 is hereby approved.

PASSED THIS 9 DAY OF June, 2020

ATTEST:

Village of Waterloo

Melissa Johnson
Village Clerk

RE: Infection Control Covid-19

Dear Julie,

Thank you for allowing us to provide information for contingency planning in the event of any exposure or pandemic associated with Coronavirus, influenza or other infectious diseases during the election. Steri-Clean, Inc. has successfully worked with commercial businesses, state and local governments, school districts and private citizens on disinfection and biohazard remediation following known and/or suspected pathogen exposures. Additionally, we've performed disinfection in vehicles, healthcare settings, government buildings, commercial businesses and residences with exposures to C. difficile, Hepatitis, MRSA, other superbugs, rodent and pigeon droppings. Our core capabilities include trauma scene cleanup ensuring the highest level of detail orientation and proven protocols.

Steri-Clean utilizes a multi-step process with quality control to ensure the highest level of cleanliness possible. Steri-Clean uses only EPA registered products with documented 'Emerging Pathogens' kill claims (Coronavirus's current classification).

Steri-Clean's general approach to disinfection and sanitation services resides in a core commitment to ensure the closest level of cleanliness as possible. We utilize EPA registered cleaner/degreasers and disinfectants with known kill claims for specific microorganisms.

We recommend that prior to any decontamination, all surfaces should be cleaned of all gross-contaminates and biofilms (clusters of microorganisms). Surfaces CANNOT be properly disinfected without the removal of these biofilms. All high touch and visibly exposed areas will have an EPA registered disinfectant applied and wiped down, then disinfectant applied again for the proper dwell time. All carpet, upholstery, furniture, and other porous materials are treated using an EPA registered disinfectant. Treatment of interior offices, warehouses, production areas, storage, and all business types shall have an EPA registered disinfectant applied through several methods including Halo foggers, handheld foggers, airless sprayers, electrostatic guns, and pump sprayers.

When an Electrostatic (ESS) spraying method is used, it delivers a positive charge of 40 micron mist that 'wraps' around the surface or structure (e.g. dashboard, seats) to deliver a comprehensive 'final step' treatment without over-wetting.

The efficacy of our services will be measured objectively through our utilization of adenosine triphosphate (ATP) measurement technology. Adenosine triphosphate is an organic chemical found in all life forms. ATP testing is a rapid measurement system used to assess the cleanliness of surfaces. As ATP is present in all organic material, most surfaces will contain some level of naturally occurring ATP; however, the reduction in ATP results following cleaning indicates effective sanitization and disinfection procedures. Steri-Clean conducts this testing pre and post cleaning/disinfection and will provide ATP test results following job completion to demonstrate the effectiveness of our services.

We have a deep knowledge of public safety, risk mitigation and fiscal responsibility with private/commercial and publicly funded organizations.

Steri-Clean is committed to following industry standard and professional association guidance promoting disinfection and infection prevention. While we hope that the library is not affected, we appreciate the opportunity to submit this information for your risk management and disaster response plans.

Pricing per Sq. Ft. is dependent on the circumstances of the exposure at the following rates:
\$0.68 totaling \$1079.16 for the space indicated as meeting room, kitchen, hallway and restrooms.

We are available to meet with you to further explain our approach and qualifications as requested.

Warmest regards,

Martie Law
